### Happiness Is . . .

Happiness is that intangible "something" that all people possess at one time or another. Even though the busy, complicated years of youth present a variety of emotional reactions, perhaps one might say that happiness is the predominant one. To some this may be the self-satisfaction experienced upon receiving a compliment on a job well-done—the "well-written" on an English composition, for instance. Others find joy in eating a Big Boy or in getting out of school early. Of course, SHS students share a special delight with each basketball victory. There is also a deeper happiness that is found in the contentment of home life; the awareness of security and the understanding that is present in a family provide a sense of well-being. The existence of a religious faith radiates an inner gladness and peace which can be described as spiritual blessedness. The giving and sharing of friendships further complete the strivings for joy in life. How the word is defined or where the feeling is experienced—at home, church, school, or elsewhere—are not the important aspects. The fact that it exists is enough.

## Experienced administrators provide

Mr. Harold M. Dick began his administrative duties of the Madison-Grant United School Corporation with the 1966-67 school year. The new superintendent completed his secondary school studies at Roll High School. Further education led to Bachelor of Science and Master of Arts degrees from Ball State University. Post graduate work has been pursued at Purdue University. Mr. Dick has previous experience in the teaching profession as an elementary and secondary school teacher, principal, and superintendent.

The seated members of the 1966-67 school board are John Marsh; Donald Hanes, Vice-President; Max Leisure; Jim Kirkwood, Treasurer; Chet Mann, President; Maurice Pierce, Secretary; and Virginia Jones. Those who are standing are Myron Peacock; Harold Dick, Superintendent; Charles Messler; and Al Woolbert.

# high standards of education

It has often been said that it is more gratifying to give than to receive. I wonder if sometimes we in the teaching profession become obsessed with our own importance and how much we are giving. Without students, there would be no need for schools. Without community support, education would be impossible. Cooperation of faculty, professional and non-professional, is very necessary for quality education. Summitville students, community, and faculty have given me much more than I can ever hope to give in return. I am deeply grateful and thankful to be a very small part of this educational community. Teaching is indeed a rewarding profession.

### "What do you know about automation?"

First came the adding machine . . . then the computer. Thus passed the bookkeeper with his green eye shade, high stool and heavy handwritten ledgers.

Yes, automation has reduced the tedious labor of keeping the records of business.

Automation creates more jobs than it destroys.

It's the free enterprise way and has given us the highest standard of living in the world and the greatest degree of individual freedom.

At I&M automated methods have enabled us to provide many more new jobs, improve our methods of generating and delivering electricity and provide our customers with improved, low-cost electric service in the bargain.

## Which circle is darker?

Sure. You could make a guess. With a 50-50 chance of being right.

But you know that success, in this age of science, takes more than guesswork. It takes careful observations. Accurate comparisons. Logical analysis. Sound deduction. These are traits we value at our new Engineering and Research center in Anderson—and we have the tools to implement them.

For instance, if a real closeup of something is desirable, we pop it under our electronic microscope and magnify it up to 200,000 diameters. If we want to analyze materials for their metallic elements, we use a spectrograph, accurate to a few parts in a million. These help us in designing new ignition systems for cars. Or control devices for missiles. Or a new kind of generator.

Look us up, after college, if you think you'll be at home in our field. Right back home in Indiana.

*(Oh, yes, if you used your scientific insight and folded the page to compare the circles, you discovered the answer.)*
